A color calibration chart featuring a grid of color patches. The patches are arranged in two rows. The top row contains patches labeled 1 through 10, and the bottom row contains patches labeled 11 through 20. Each patch is a small square with a specific color and a numerical value printed next to it. The values range from 1 to 20, corresponding to the patch numbers.

A color calibration target featuring a grayscale step wedge with eight steps labeled 1 through 8, and a series of color patches labeled 1 through 30. The patches include primary and secondary colors, as well as skin tones and neutral colors. The chart is used to ensure color accuracy and exposure consistency in digital imaging.

Methylene Blue Method for Measuring Thiosulfate
as described in American National Standards
Institute Standard IT 9.1. Results of the
test indicate a residual thiosulfate level of

.0031 g S₂O₃/m². This is within the archival
limit of .014 g/m² specified for archival
quality microfilm products.
